FLUKE ®

Instrument Security Procedures

Model:

ii900/ii910

Product Name:

Industrial Imager

Instrument Description:

Handheld instrument to visualize sound.

Memory Description:

This device has internal non-volatile memory for holding firmware, configuration files, startup splash screen, calibration coefficients, factory settings, and user interface settings.

Image data is stored on an embedded multimedia card (eMMC) device.

Memory Cleaning Instructions:

Images stored on the internal eMMC device are deleted through the user interface or through the USB interface. The Imager firmware does not sanitize the internal memory after deletion or provide a method to do so.
